## INTRODUCTION

The ZULU® line of binoculars utilizes category-leading features like high quality glass, fully multi-coated lenses and phase coated prisms to provide maximum brightness, contrast and optimal resolution. The rugged design pairs well with the lightweight construction to offer a high level of durability that is not reflected in weight. Fully sealed barrels are nitrogen filled for waterproof and fog-proof performance.

The ZULU line of binoculars are covered by the SIG SAUER Electro-Optics Infinite Guarantee®.

## GENERAL OPERATION

### SETTING THE DIOPTER ADJUSTMENT

Setting the diopter adjustment of your binocular properly is very important, as properly adjusted binoculars will prevent eye strain and provide you with a crisp, sharp image.

#### To set the diopter adjustment:

1. View an object about 100 yards in the distance.
2. Close your right eye.
3. Adjust the center focus wheel (located between the two barrels) until the image presented to your left eye is clear and sharp.

4. Close your left eye.
5. If your binocular has a locking diopter ring, pull the diopter ring out to adjust.
6. Adjust the diopter adjustment dial located around the right eyepiece, near the eyepiece, until the image presented to your right eye is clear and sharp.
7. If your binocular has a locking diopter ring, push the diopter ring in to lock it in place

Your binocular is now focused for your eyesight. To make any adjustments in the field, simply turn the center focus dial while viewing through both barrels.

## Twist-up Eyecups

SIG SAUER binoculars feature eyecups you can twist in and out to accommodate the eye relief required when wearing eyeglasses.

## Interpupillary distance of binoculars

Interpupillary distance means the distance between the right and left eyes.

1. Set the distance between the center of the right and left ocular lenses of the binoculars to your interpupillary distance.
2. Look at a distant object to make an adjustment while folding back the main body of the binoculars.
3. Your interpupillary distance is correctly set when the field of view can be seen by both eyes as a single circle (see illustration).

## CLEANING

### CAUTION

ALWAYS BLOW DUST OR DEBRIS FROM BINOCULAR LENSES PRIOR TO USING ANY CLOTH OR LENS PEN. FAILURE TO DO THIS MAY RESULT IN SCRATCHING OF THE BINOCULAR LENSES.

- You can clean the fully armored body by simply wiping off any accumulated dirt or dust.
- Clean the lenses as you would a camera lens.
- Use a standard lens brush to remove dust.
